ScamSentry AI

UI/UX Design System & Screen Flow

Hand-off document for the web and mobile product: tokens, components, every core screen with its states, and notes for building each one as a real React component.

Revision	1.1 (replaces 1.0)
Date	31 October 2026
Platforms	Responsive web, Android-first mobile
Developer	Sartaj
Status	Ready for implementation

All phone numbers, UPI IDs, links and report counts shown in mockups are dummy data.

11 Web: alerts
12 Mobile: home, lookup, report
13 Mobile: map, alerts, menu
14 Implementation notes

Principles

Carried over from revision 1.0 and tightened so each one can be tested in a design review.

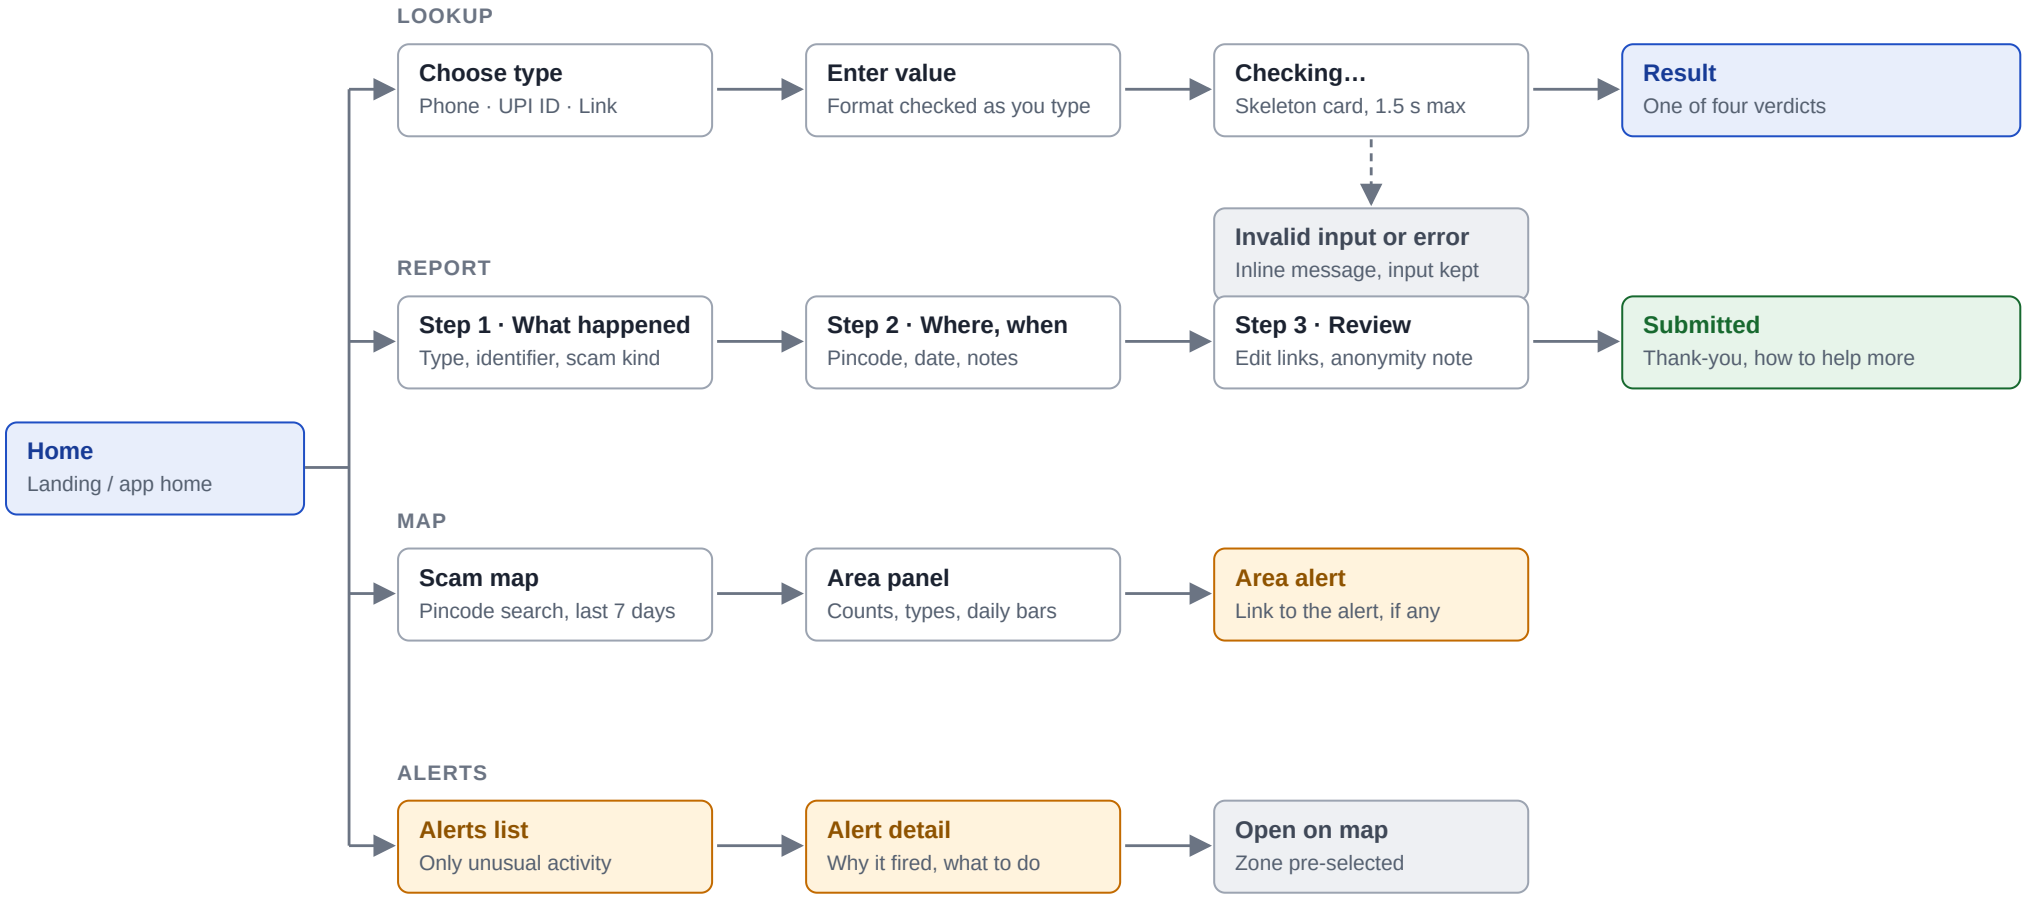

PRINCIPLE	HOW IT SHOWS UP IN THE PRODUCT
Simple first	Lookup or Report is one click from the homepage. The lookup box sits in the hero itself, so there is no extra step.
Trustworthy	Plain white surfaces, one brand colour, plain language. No glow effects, stock photos or "AI" visuals. Verdicts say "reported", never "proven".
Fast access	Phone, UPI ID and link share one lookup flow and one input pattern.
Clear risk	Every status uses colour, an icon and a text label together, so it still reads in greyscale or for colour-blind users.
Privacy focused	Reports are anonymous and the screen says exactly what is and is not stored. Map and alerts show areas, never reporters.
Mobile ready	Android-first. 48 dp touch targets, bottom navigation, sticky primary action on every form step.

What changed in this revision

CHANGE	WHY
Hero image and phone mockup removed	The landing page now leads with the working lookup box. Real tools convince faster than decoration.
Gradient blobs replaced by area zones on the map	Heat blobs implied exact locations. Pincode-zone shading matches the "area-level" promise.
"No reports yet" is its own neutral state	Green now appears only when a trusted source backs it. Silence is not safety.
Fixed inconsistent numbers	The map said 42 but the side panel said 12; legend bands overlapped at 20; "near you" clashed with "21 areas". All reconciled.
Local conventions	Android frames, +91 number grouping, pincodes, 1930 helpline, English and Hindi switcher.
Added missing states	Loading, invalid input, rate limit, offline, empty map, empty alerts.

User journey

Four tasks, all reachable from Home in one step. Lookup and Report are the primary paths; Map and Alerts are secondary and never block them.

Result verdicts: Known scam · Suspicious · No reports yet · Verified (only with a named source)

Alerts fire on: spikes and new scam types only

Design tokens

One brand colour, three risk colours, a neutral scale. Every text and background pair below meets WCAG AA (4.5:1) at body size; the ratio is printed on each swatch.

15.9:1
Ink #1B2230
Body text, headings

6.4:1
Ink 2 #556070
Secondary text

Line #E2E5EA
Dividers, card borders

Surface #F5F6F8
Page background

7.1:1
Brand #1F4FC4
Primary buttons, links

Brand tint #E8EEFB
Selected states

5.8:1
Risk red #B42318
Known scam

Red tint #FDEDEB
Known scam background

5.6:1
Risk amber #8F5300
Suspicious

Amber tint #FFF3DD
Suspicious background

6.0:1
Safe green #17692F
Verified only

Green tint #E7F4EA
Verified background

TYPE: INTER (WEB), ROBOTO (ANDROID), NOTO SANS DEVANAGARI FOR HINDI

STYLE	SIZE / LINE	WEIGHT	USE
Display	32 / 38	Bold	Landing headline only
Heading 1	24 / 30	Bold	Page titles
Heading 2	18 / 24	Bold	Card and section titles
Body	15 / 22	Regular	Default text (16 / 24 on mobile)
Label	13 / 18	Bold	Buttons, tabs, badges
Caption	12 / 16	Regular	Metadata, helper text
Number	26 / 32	Bold, tabular	Phone numbers in results

SHAPE & SPACING

Spacing	4 · 8 · 12 · 16 · 24 · 32 · 48
Radius	6 inputs and buttons · 10 cards · 999 chips
Border	1 px Line. No shadows on cards; only sheets and menus get one.
Focus ring	3 px brand at 22% + 1 px brand border
Touch target	44 px web · 48 dp mobile
Motion	150 ms ease-out, state changes only

Mockups in this PDF are drawn with a substitute sans font. Build with Inter.

Components

Small set, reused everywhere. If a screen needs something not listed here, add it here first.

BUTTONS

Check | Hover | Focus | Disabled | Checking

Secondary | Text action

TEXT INPUT · DEFAULT, FOCUS, ERROR, DISABLED

98765 43210

+91 98765 4

+91 98765 43

Disabled

Enter all 10 digits

STATUS BADGES AND CHIPS

Known scam | Suspicious | No reports yet | Verified | Digital arrest | Fake KYC | Loan app

STEPPER (REPORT FLOW)

✓ What happened — 2 Where and when — 3 Review

LOOKUP TYPE SELECTOR

Phone | UPI ID | Link

ALERT ROW

SPIKE — 3 hr ago

HSR Layout, Bengaluru

18 reports in 24 h, about 4.5× the usual. Mostly digital arrest.

INLINE NOTICES

Reports are community-submitted and not a legal finding.

You're offline. Showing the last result we saved.

EMPTY STATE

No unusual activity in 560102

Normal reports are still on the map.

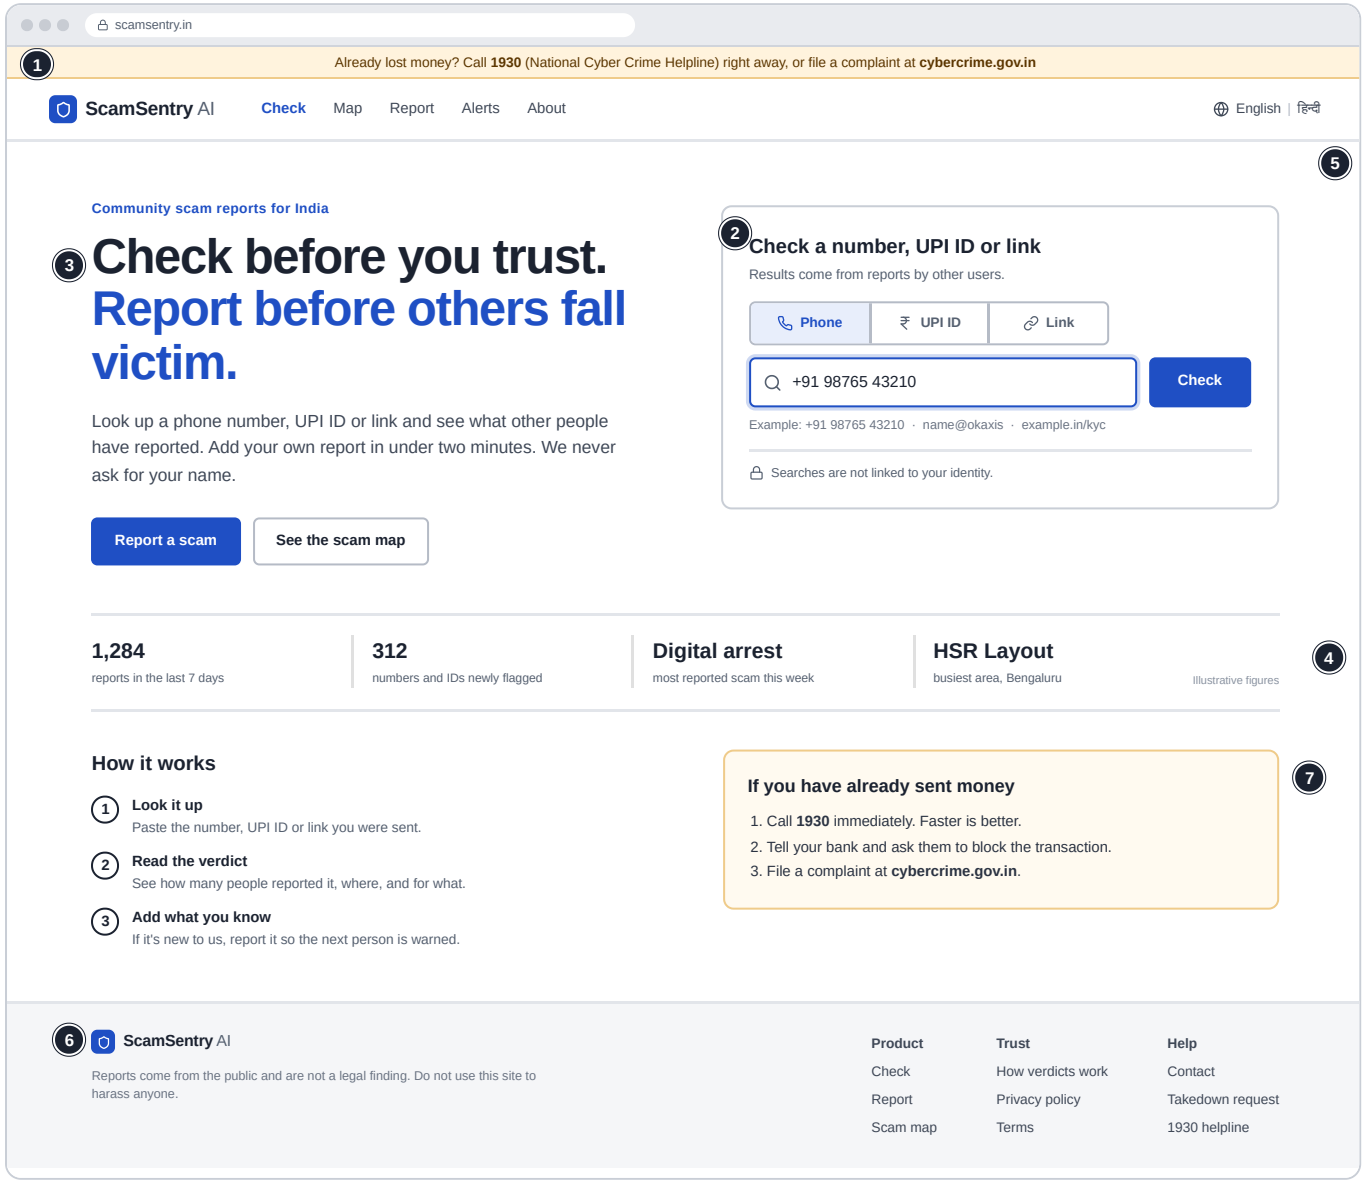

View scam map

BOTTOM NAVIGATION (MOBILE)

Home | Map | Report | Alerts | Menu

Web: landing page

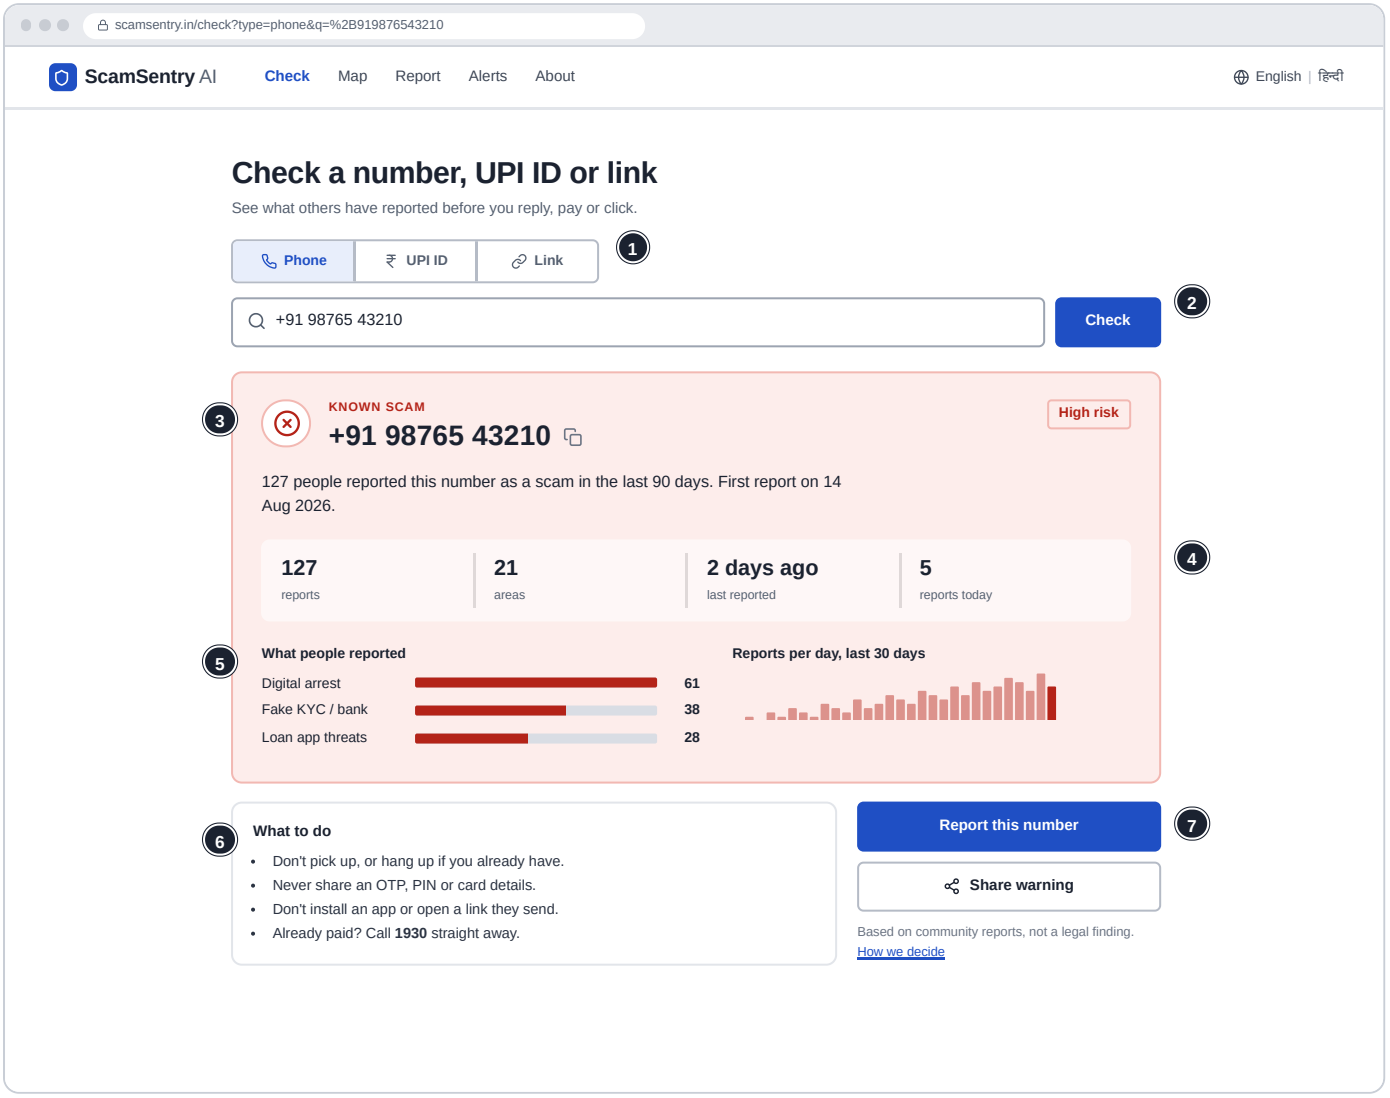

Landing now works as a tool first, brochure second.

1. **Emergency strip.** The 1930 helpline sits above everything, on every page. It is a link-out, not our feature.
2. **The lookup is the hero.** Type, paste, Check. No extra click, no sign-in.
3. **Plain headline.** One accent colour. No photo, no floating phone, no gradient.
4. **Live numbers** from the stats endpoint, refreshed hourly. Show nothing rather than a zero if the call fails.
5. **Language switch** (English / हिन्दी) in the header. More languages later.
6. **Trust footer.** "How verdicts work", privacy and takedown links are mandatory.
7. **Money-lost panel** for people who arrive already scammed.

Web: lookup & result

Result for a known-scam phone number. The same layout is used for UPI IDs and links.

1. **One selector for all three types.** Format check runs as you type; the Check button stays enabled.
2. **One input, one button.** Pressing Enter checks. The value stays in the box after a result.
3. **Verdict first.** Icon, label, colour and text say the same thing.
4. **Numbers carry the weight:** reports, distinct areas, recency. "Near you" is dropped because it contradicts "21 areas".
5. **Context, not just a count.** What people reported and when.
6. **Safety guidance** is always shown, in short plain steps.
7. **Next actions:** Report adds to the count; Share copies a warning with the link.

Web: result states

Same card, four verdicts. A link result adds domain-age and redirect signals.

SUSPICIOUS

+91 91234 56789

Medium risk

12 people reported unusual calls from this number in the last 30 days. It isn't confirmed as a scam yet.

12	5	1 day ago
reports	areas	last reported

UPI fraud · Fake customer care

Be careful. Don't share OTPs or pay anything to this caller.

NO REPORTS YET

kyc.update92@okaxis

Not enough data

Nobody has reported this UPI ID so far. That does not mean it is safe.

Before you pay: check the name shown by your UPI app, and never pay to receive money.

Were you contacted by this ID? Your report helps the next person.

VERIFIED BUSINESS

1800 123 4567

Low risk

Matches the official contact number of XYZ Bank.

XYZ Bank	Banking	12 Oct 2026
business	category	source checked

Source: bank's published contact list. Shown only when a named source matches.

Banks never ask for your PIN, OTP or CVV on a call.

KNOWN SCAM

sbi-kyc-update.in/login

High risk

Reported by 43 people in the last 7 days. Pretends to be a bank KYC page.

43	6 days ago	3
reports	domain registered	redirects before page

Fake KYC · Phishing page

Do not enter any details. If you did, call your bank and 1930.

LOADING

INVALID INPUT

Enter a 10-digit mobile number, starting with 6, 7, 8 or 9.

TOO MANY CHECKS

You've checked a lot in a short time. Try again in 40 seconds.

SERVER ERROR

We couldn't check this right now. Your input is saved. **Try again**

RULES BEHIND THE LABELS

VERDICT	PROPOSED RULE
Known scam	10+ reports in 90 days from 3+ areas
Suspicious	2–9 reports, or a strong signal such as a very new domain
No reports yet	0 reports, or 1 unverified
Verified	Exact match to a named source; show source and check date

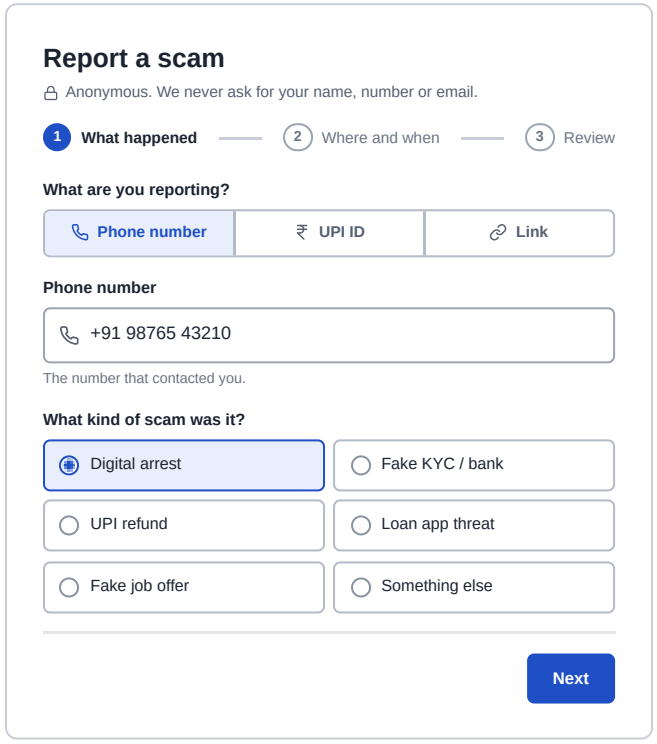

Thresholds to be confirmed with backend.

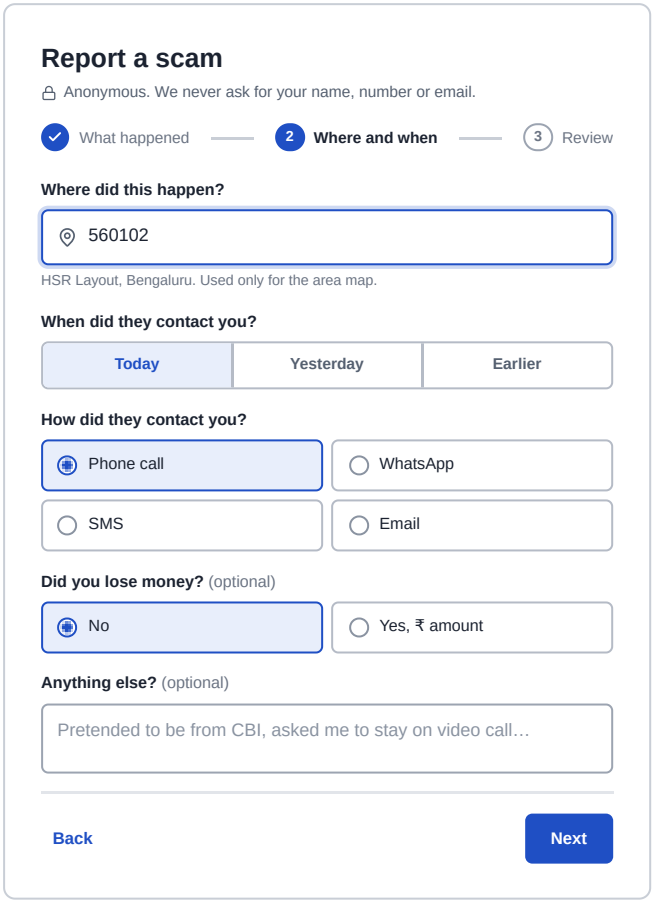

EDGE STATES (BOTTOM ROW)

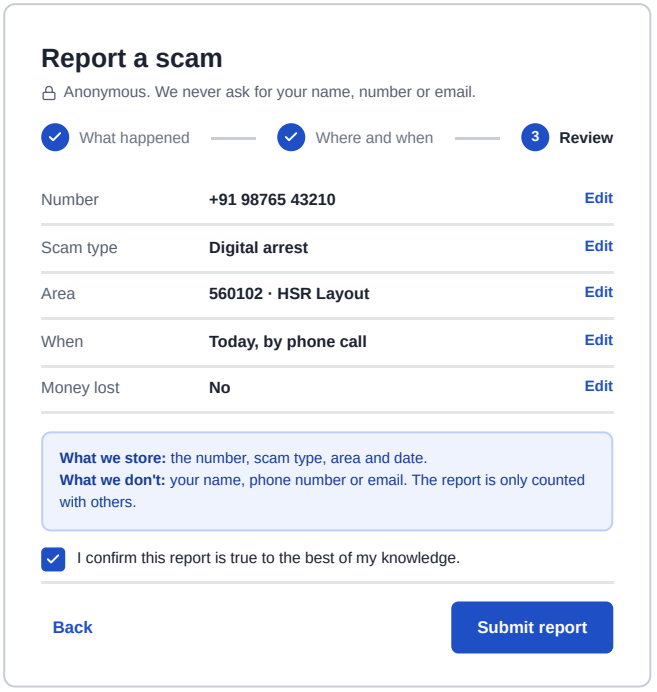

Loading skeleton, invalid input, rate limit and server error. The input is never cleared on error. Details are in the Implementation notes.

Web: report a scam

Three steps, under two minutes. Progress is kept if the tab is closed by mistake.

Step 1

Choose the type first so the field label, keyboard and validation match. Scam kinds are tap-to-select cards, not a dropdown.

Step 2

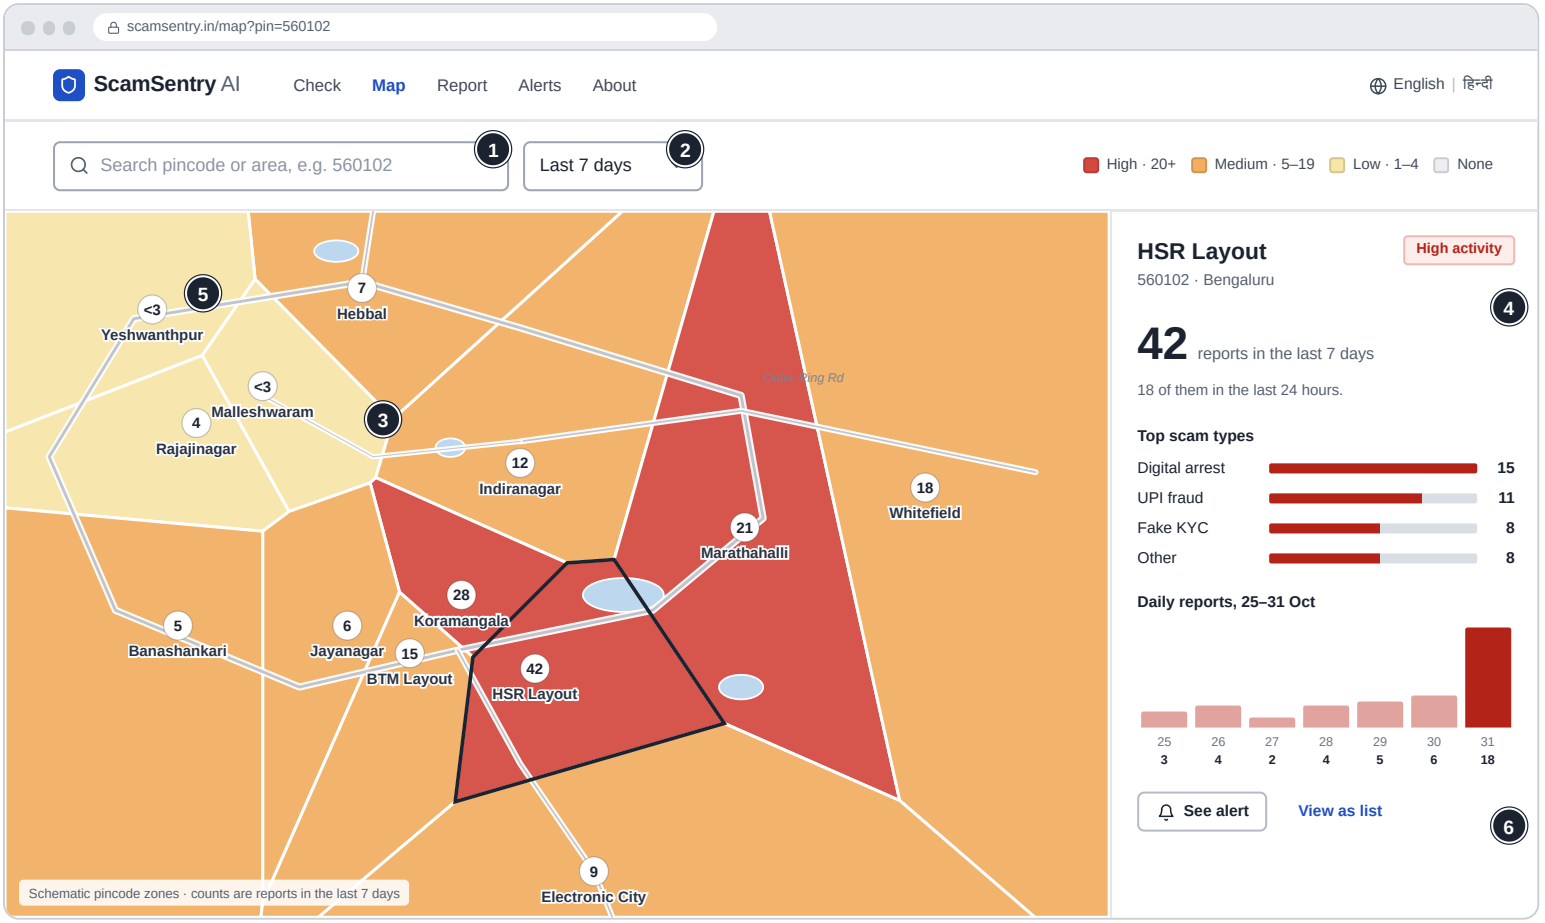

Pincode field suggests the area name as you type. Money lost stays optional so nobody abandons the form.

Step 3

Every row has an Edit link. The privacy box lists exactly what is stored. Submit is disabled until the box is ticked.

Web: scam activity map

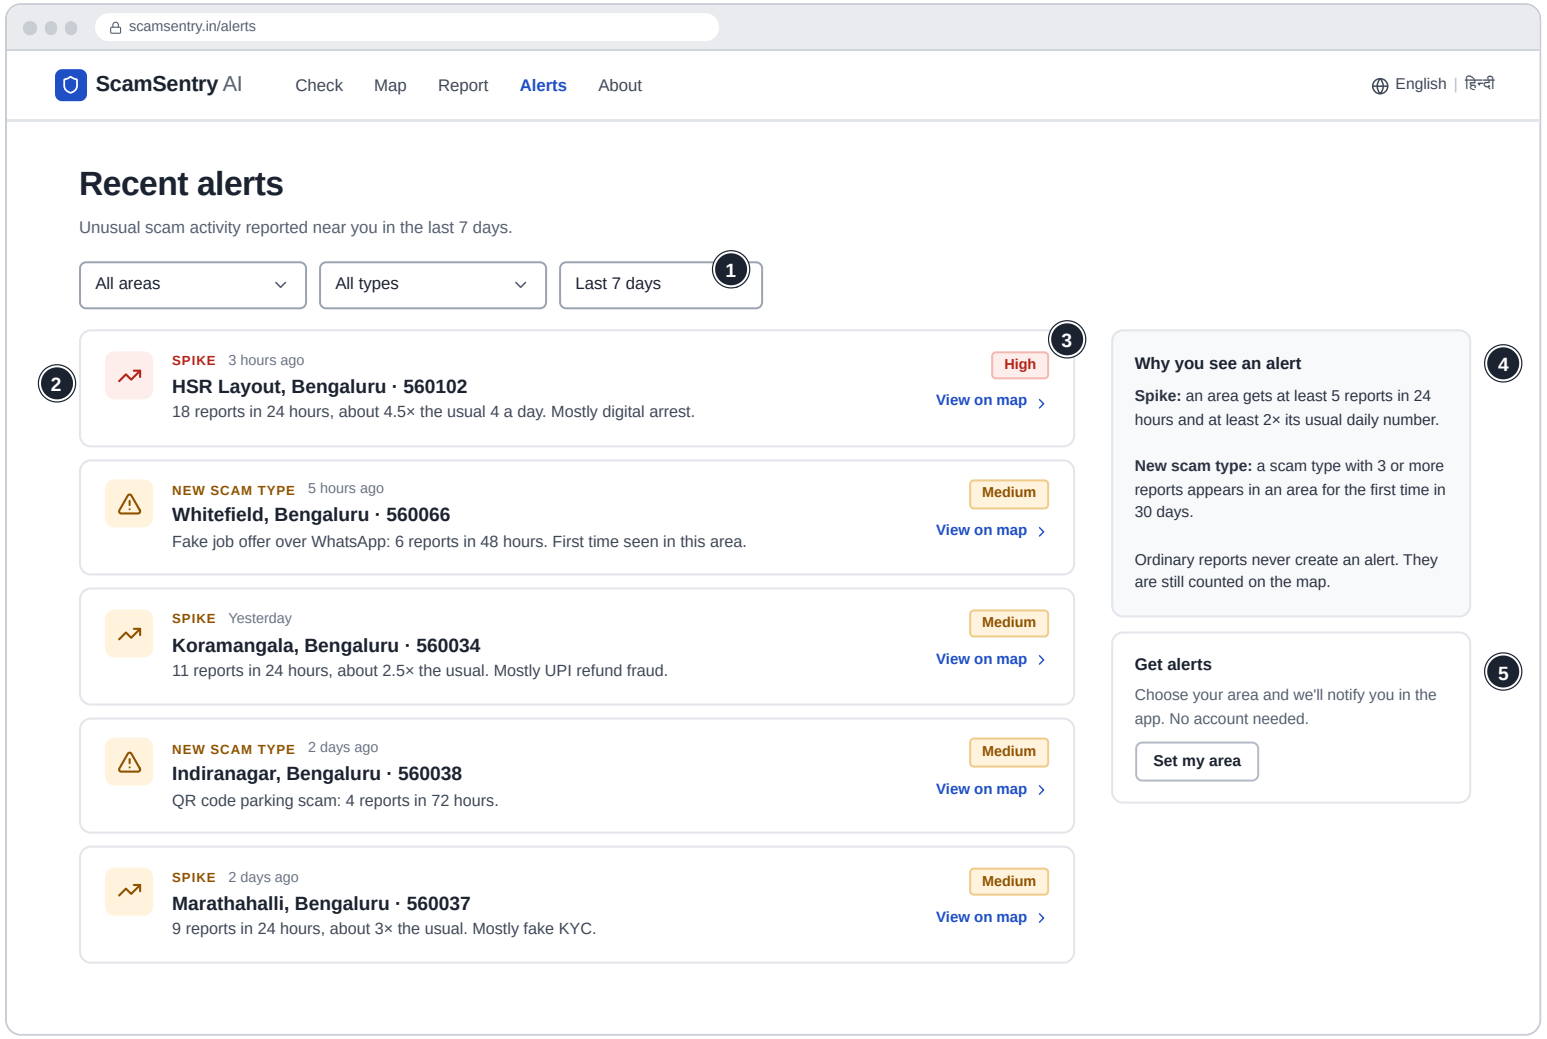

Last seven days of area-level activity. Selecting a zone fills the panel; nothing here points to a person or a street.

1. **Pincode search.** Accepts a 6-digit pincode or area name; unknown pincode shows "No reports for this area yet".
2. **Range filter:** 24 hours, 7 days (default), 30 days.
3. **Pincode zones, not heat blobs.** Shading shows a band, the number shows the count. Low is pale yellow, not green, because a few reports never means "safe".
4. **Area panel.** Total, share in the last 24 h, top types, daily bars. The tallest bar is today.
5. **Thin data is hidden.** Zones with fewer than 3 reports show <3 and read "Few reports" in the panel, so one person can't be traced.
6. **List view** gives the same data as a table for screen readers and slow connections.

Web: alerts

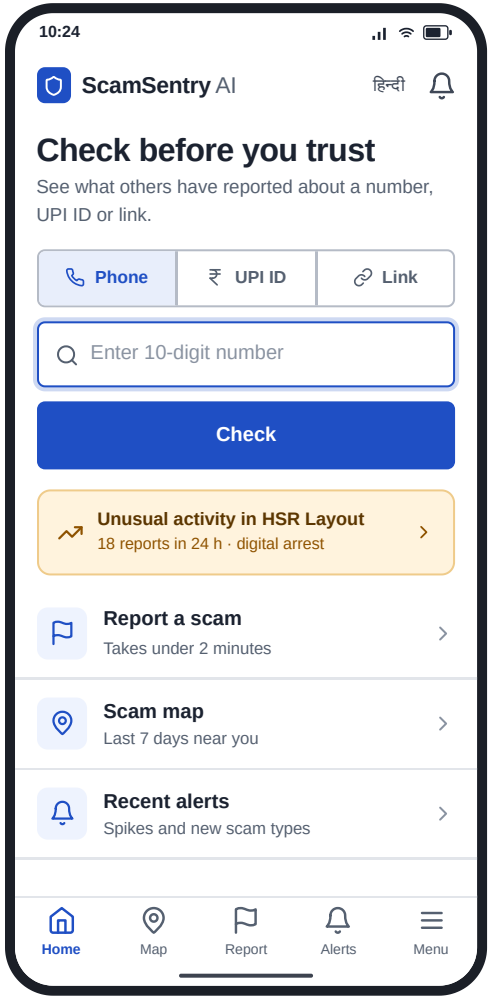

Only unusual activity. Normal reports stay on the map, so an empty alerts page is good news.

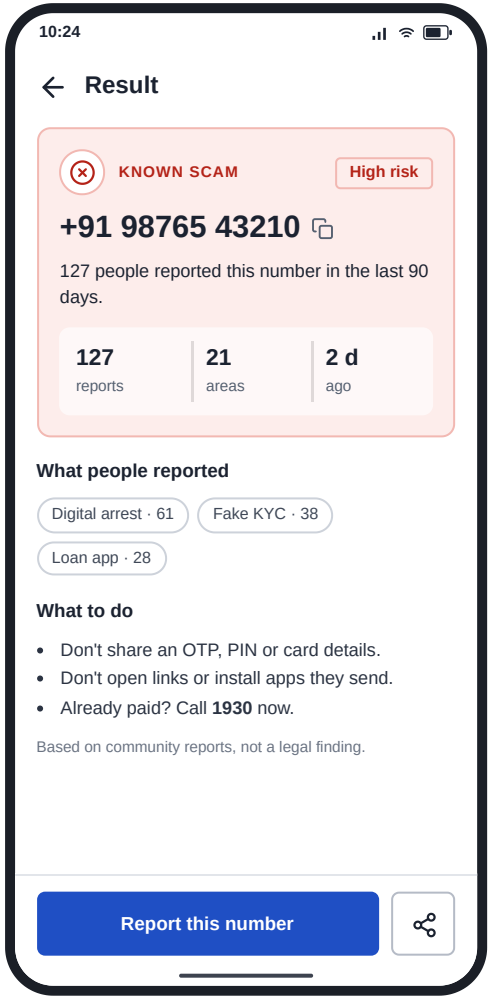

1. **Filters** for area, type and time. Area defaults to the visitor's last searched pincode.
2. **One alert per row:** kind, place, how unusual, and a one-line reason with numbers.
3. **Severity** badge: High is 4× or more the usual; Medium is 2–4×, or any new type.
4. **Rules are shown in plain words,** so people trust that quiet means quiet.
5. **Alert subscriptions** are by area only. No account, no phone number stored.

Mobile: home, lookup, report

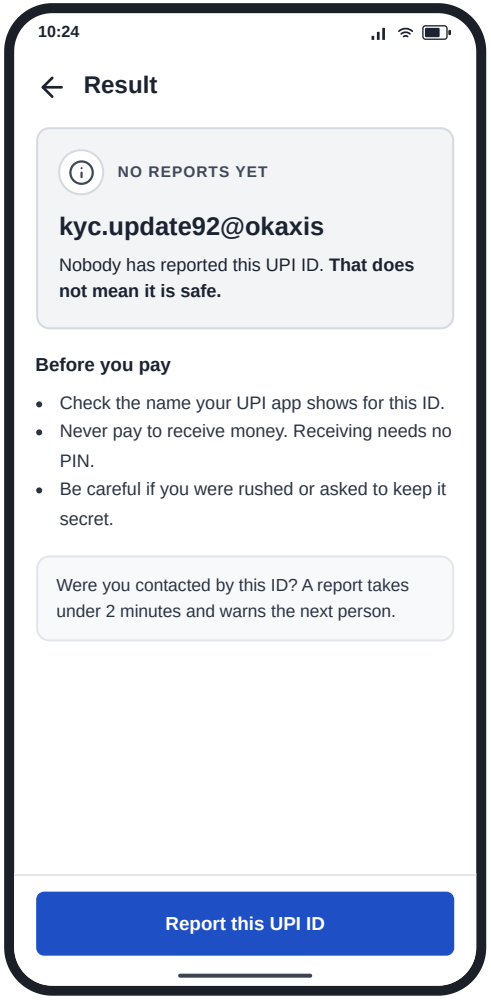

Android-first, 360 dp wide. Bottom navigation on browse screens; focused flows (result, report) hide it and pin one action.

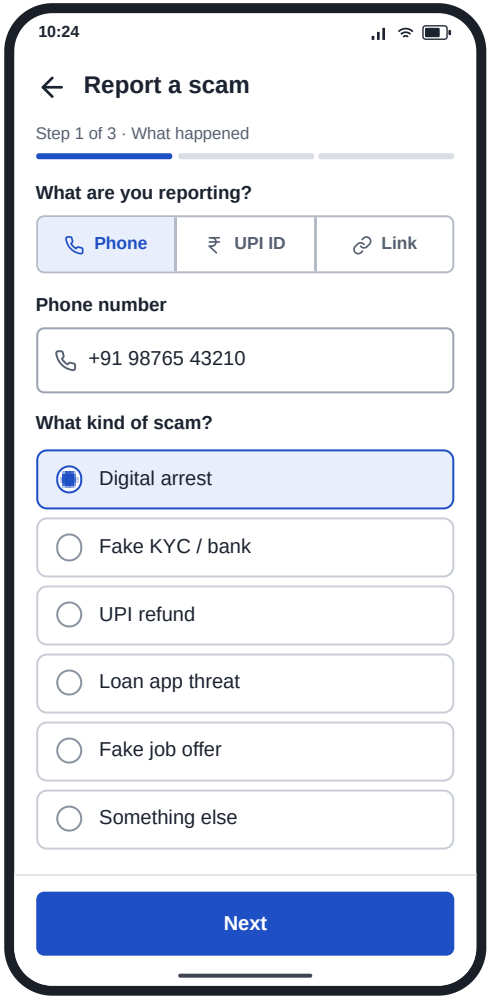

Home
Lookup is above the fold. An amber strip links to unusual activity in the visitor's area.

Result: known scam
Verdict, number and counts at the top. The primary action is pinned to the bottom edge.

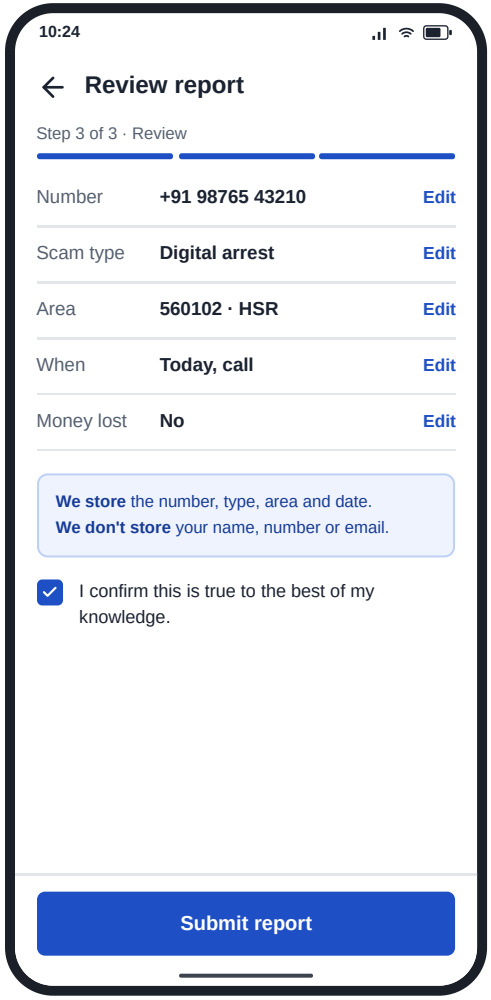

Result: no reports
Neutral grey, plain "does not mean it is safe" copy, and a prompt to report.

Report, step 1
Scam kinds are 48 dp tap rows. Next stays pinned above the gesture bar.

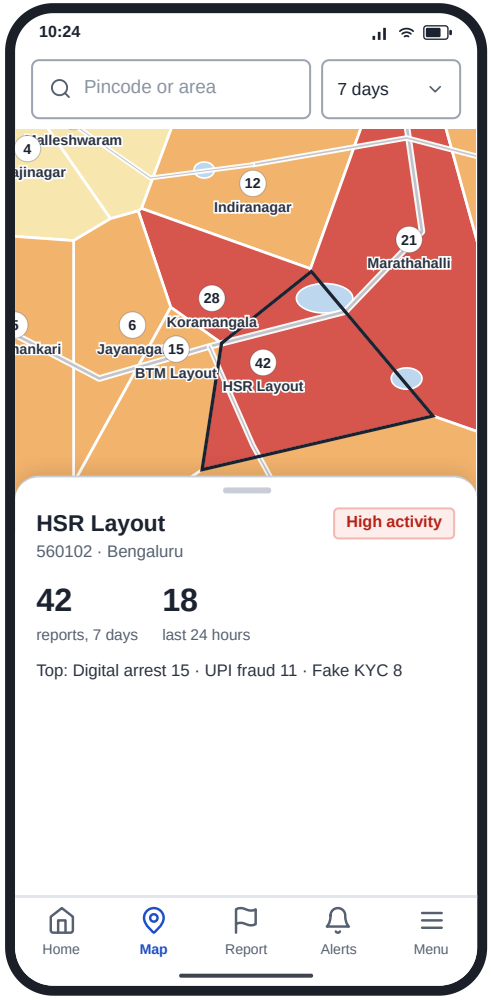

Mobile: map, alerts, menu

Same data and rules as web, rearranged for one thumb.

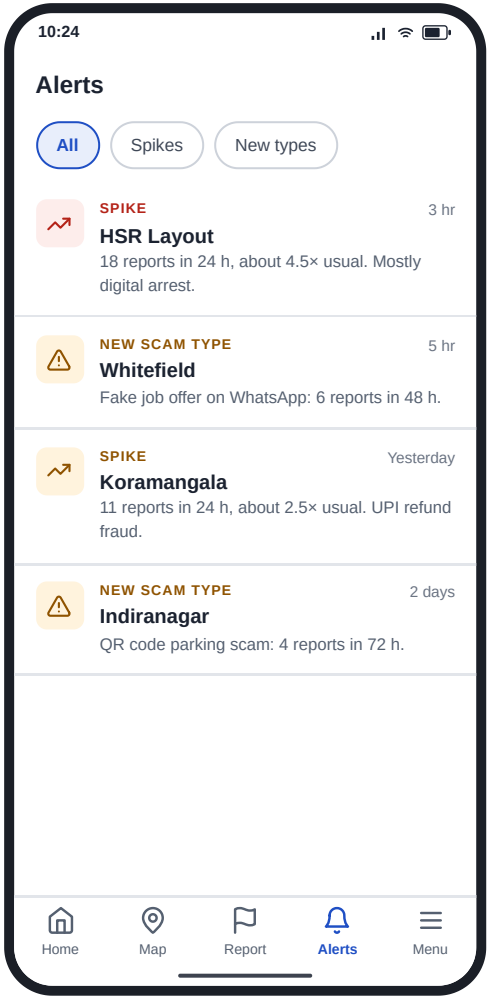

Report, review

Edit links on every row. The privacy box states what is and is not stored.

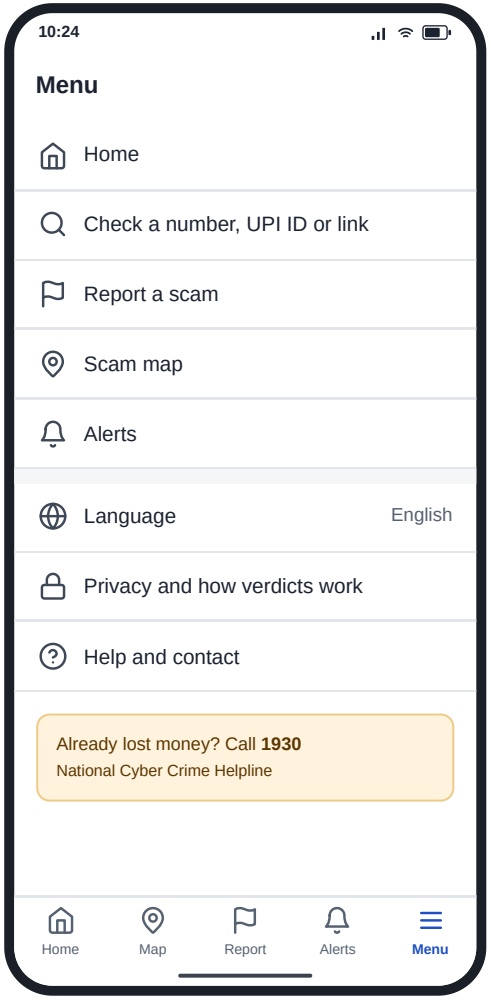

Scam map

Same zones as web. A bottom sheet replaces the side panel; drag up for daily bars.

Alerts

Filter chips: All, Spikes, New types. Rows are short; tap for detail and "View on map".

Menu

Language, privacy and the 1930 helpline are always one tap away.

Implementation notes

Build each screen as a real React component from the shared parts below. Endpoint shapes are proposals for Sartaj and the backend to agree.

ROUTES

ROUTE	SCREEN
/	Landing (web) / Home (mobile)
/check?type=&q=	Lookup and result
/report	Report wizard (steps in local state)
/report/done	Thank-you
/map?pin=	Scam map
/alerts	Alerts
/how-it-works	Verdict rules

COMPONENT TREE

```
<AppShell> <TopNav/> <BottomNav/>
 <LookupForm> TypeSelector, IdentifierInput
 <ResultCard verdict> VerdictBadge, StatRow, ReasonBars, Guidance
 <ReportWizard> Stepper, StepWhat, StepWhere, StepReview
 <ScamMap> ZoneLayer, AreaPanel, ListView
 <AlertList> AlertRow, AlertFilters
```

RULES TO BUILD IN

- **Privacy:** store no IP, device ID or name with a report. Rate-limit on a salted hash that expires in 24 h. Normalise numbers to E.164. Hide zones with fewer than 3 reports.
- **Accessibility:** WCAG 2.2 AA. Status is icon + text + colour. Visible focus ring. Results in an `aria-live="polite"` region. Map has a list view.
- **Copy:** say "reported", never "scammer". One sentence explains every verdict. Strings in i18n files (English, Hindi first).
- **Motion:** 150 ms ease-out on state changes. Respect prefers-reduced-motion.

API

ENDPOINT	SHAPE (PROPOSED)
GET /api/lookup	type, value → verdict, reports, areas, lastReportedAt, byType[], daily[], source?
POST /api/reports	type, value, scamType, pincode, occurredOn, channel, lostMoney?, notes?
GET /api/map	days → [pincode, area, count]
GET /api/alerts	area?, kind? → alerts[]
GET /api/stats	weekly totals for the landing strip

LOOKUP STATES

STATE	BEHAVIOUR
idle / validating	Check stays enabled. Format errors show after blur, not on every keystroke.
loading	Skeleton after 300 ms. Never clear the input.
success / empty	Verdict card. Empty = "No reports yet".
error	Message plus Try again. Input kept.
429	"Try again in N seconds" from Retry-After.
offline	Notice strip; show last saved result.
